

# TABLE OF CONTENTS

<b>0.0 EXECUTIVE SUMMARY .....</b>	<b>1</b>
<b>1.0 INTRODUCTION .....</b>	<b>2</b>
What is this series about? .....	2
<i>The research examines the status of aggregators plus other key metrics in car / auto and home insurance. . . . .</i>	2
Rationale .....	2
<i>... including the behaviour of non-standard policyholders and the shift to buying through mobile devices .....</i>	2
Global consumer research .....	3
<b>2.0 CONSUMER OVERVIEW .....</b>	<b>6</b>
Introduction .....	6
Consumer propensity to research and purchase insurance products online .....	7
Overview .....	7
<i>Canadian consumers are least likely to research or acquire insurance online. . . . .</i>	7
Segmentation by age and annual household income .....	10
<i>... and the same finding applies to respondents aged 55 or over .....</i>	10
<i>Propensity to research or acquire insurance online tends to increase with annual household income .....</i>	12
Number of sites consulted when researching insurance online .....	14
<i>The number of sites used by online respondents lies at 3.3 when averaged across all eight countries. . . . .</i>	14
Car insurance .....	15
Switchers and new buyers within the total .....	15
<i>Switching rates for car insurance vary considerably from country to country across the eight surveyed. . . . .</i>	15
<i>... which means that there are large differences in the magnitude of the available market each year .....</i>	15
Distribution channels .....	18
<i>Aggregators are ranked first or second among distribution channels in all but two countries. . . . .</i>	18
Distribution interfaces .....	21
<i>Online sales of car insurance remain substantially higher in the UK than in the other seven countries. . . . .</i>	21
<i>... although the trend is for them to increase each year in most of them .....</i>	21
Devices used by online buyers .....	23
<i>Among online buyers, use of mobile devices has advanced furthest in Canada. . . . .</i>	23
Profile of customers buying through aggregators by age and annual household income .....	26
<i>Generally speaking, older respondents are less likely to purchase via comparison sites. . . . .</i>	26
<i>... but annual household income does not appear to be a consistent driver of this metric .....</i>	27
Switching rates: aggregators versus the average for all distribution channels .....	29
<i>As would be expected, buyers using aggregators are by far the most likely to be switching policy. . . . .</i>	29
Standard and non-standard policies .....	31
<i>As an eight-country average, 18.3% of car insurance customers are non-standard in one way or another. . . . .</i>	31
<i>... most commonly because they own two or more vehicles. . . . .</i>	31
Telematics-enabled and not telematics-enabled policies .....	33
<i>Penetration of telematics-enabled cover in Italy is far ahead of that in the other seven countries. . . . .</i>	33
<i>... which is significant, as the buying behaviour of customers with such cover is different .....</i>	33
Home insurance .....	35
Switchers and new buyers within the total .....	35
<i>Switching rates for home insurance are highest in Germany, Spain and the UK. . . . .</i>	35
<i>... and stand at a fairly similar level in the other five countries .....</i>	35
Distribution channels .....	38
<i>Aggregators vie with banks and insurance brokers as the main alternative to direct sales and tied agents .....</i>	38
Distribution interfaces .....	40

**AGGREGATION METRICS: CONSUMER APPROACHES TO ONLINE INSURANCE COMPARISON SITES IN SELECTED GLOBAL MARKETS**

<i>Face-to-face sales of home insurance still account for more than 50% of total sales in four countries</i> .....	40
Devices used by online buyers .....	43
<i>Online buyers in Germany and the UK are least likely to use tablets or mobile phones</i> .....	43
Profile of customers buying through aggregators by age and annual household income.....	45
<i>Use of comparison sites to buy home insurance is lowest among respondents aged 55 or more</i> .....	45
... <i>and peaks by a small margin, as an eight-country average, among those in the highest income group</i> .....	46
Switching rates: aggregators versus the average for all distribution channels.....	48
<i>Consumers buying through aggregators in the UK are most likely to be switching provider</i> .....	48
Standard and non-standard policies .....	50
<i>Non-standard home insurance policies make up 30.1% of the total as an eight-country average</i> .....	50
... <i>with a requirement for cover for high value contents being the main cause of this classification</i> .....	50
<i>Generally, non-standard policyholders use a broader range of distribution channels than standard ones</i> .....	50
Analysis across car and home insurance .....	53
Devices used by online buyers segmented by age .....	53
<i>Online insurance buyers aged 18 to 34 are most likely to use mobile devices for this purpose</i> .....	53
Overlap in usage of aggregators.....	54
<i>Most buyers through aggregators acquire just one of car or home insurance in this way, not both</i> .....	54
Performance metrics for leading aggregators .....	56
Consumer awareness .....	56
<i>Aggregators in Germany, Italy, Spain and the UK record the highest scores for awareness</i> .....	56
... <i>but those in Canada and the US are not widely recognised by consumers</i> .....	56
User conversion rates.....	58
... <i>and they are also not as strong at converting visitors to buyers as their counterparts in Europe</i> .....	58
Planned usage of aggregators .....	59
Likelihood of using an aggregator in the next 12 months .....	59
<i>Consumers' future intentions indicate that the US will remain the least developed aggregator market</i> .....	59
... <i>and the UK the most developed one, albeit it is now at or close to maturity</i> .....	59
<i>Overall, the influence of aggregators is likely to grow in future in most countries</i> .....	62
<b>3.0 AUSTRALIA.....</b>	<b>64</b>
