

TABLE OF CONTENTS

0.0 EXECUTIVE SUMMARY	1
1.0 INTRODUCTION	2
What is this series about?	2
<i>The research examines the status of aggregators plus other key metrics in car / auto and home insurance.</i>	2
Rationale	2
<i>... including the behaviour of non-standard policyholders and the path to purchasing from aggregators</i>	2
Global consumer research	3
2.0 CONSUMER OVERVIEW	6
Introduction	6
Consumer propensity to research and purchase insurance products online	7
Overview	7
<i>Consumers in the UK are most likely to research or acquire insurance online.....</i>	7
Segmentation by age and annual household income	10
<i>Those aged over 55 remain less likely to research and purchase insurance online</i>	10
<i>Propensity to research or acquire insurance online tends to increase with annual household income</i>	12
Number of sites consulted when researching insurance online	14
<i>Consumers are tending to use fewer websites when researching insurance online</i>	14
Usage of aggregators for products and services apart from insurance	15
<i>Respondents in Brazil and China are most likely to use comparison sites for banking products.....</i>	15
<i>Utilisation of aggregators is higher for home energy and broadband services than for banking products.....</i>	16
<i>... and is also significant for mobile phone subscriptions.....</i>	18
Car insurance	20
Switchers and new buyers within the total	20
<i>Switching rates for car insurance vary considerably from country to country across the ten surveyed.</i>	20
<i>... which means that there are large differences in the magnitude of the available market each year.....</i>	20
Use of aggregators	22
<i>Propensity to use comparison sites varies a lot across the ten countries.</i>	22
<i>... peaking in the highly developed UK market</i>	22
Distribution channels	26
<i>Direct sales (including sales via tied agents) constitute the leading channel in all but one country... ..</i>	26
<i>... but insurance brokers and other channels are also significant.</i>	26
<i>... both for customers acquiring via comparison sites and those not using them</i>	28
Distribution interfaces	31
<i>Online sales of car insurance remain substantially higher in the UK than elsewhere.....</i>	31
<i>Seemingly, there is resistance to online purchase in several countries, most notably France.....</i>	31
Devices used by online buyers	34
<i>A rising proportion of online sales is happening through mobile phones</i>	34
Profile of customers buying through aggregators by age and annual household income.....	37
<i>In general, younger respondents are most likely to purchase via comparison sites.....</i>	37
<i>... as are those on higher and intermediate annual household incomes.....</i>	38
Switching rates: aggregators versus the average for all distribution channels.....	40
<i>As would be expected, buyers using aggregators are far more likely to switch providers than average.....</i>	40
Home insurance	42
Switchers and new buyers within the total	42
<i>The switching rate for home insurance is highest by far in the UK.</i>	42
<i>... followed at a distance by Spain.....</i>	42

AGGREGATION METRICS: CONSUMER APPROACHES TO ONLINE INSURANCE COMPARISON SITES IN SELECTED GLOBAL MARKETS

Use of aggregators	44
<i>Use of comparison sites is generally lower for home insurance than it is for car insurance.....</i>	<i>44</i>
Distribution channels	48
<i>As a ten-country average, around 20% of sales of home insurance are through banks</i>	<i>48</i>
<i>... but more than double that figure is due to direct sales (including tied agents).....</i>	<i>48</i>
<i>Users of aggregators are more likely to buy from a broker or indirect channel apart from a bank.....</i>	<i>50</i>
Distribution interfaces	53
<i>For home insurance, face-to-face sales still outweigh online sales in France, Italy and Spain</i>	<i>53</i>
<i>... where it is seemingly difficult to grow online distribution from its current level</i>	<i>53</i>
Devices used by online buyers	56
<i>Most online sales are concluded through laptop or desktop computers in all countries apart from China</i>	<i>56</i>
Profile of customers buying through aggregators by age and annual household income.....	59
<i>Use of comparison sites to buy home insurance is generally lowest among respondents aged over 55</i>	<i>59</i>
<i>... and is most likely to peak among those in the highest annual household income group</i>	<i>60</i>
Switching rates: aggregators versus the average for all distribution channels.....	62
<i>Consumers buying through aggregators in Australia are least likely to be switching provider</i>	<i>62</i>
<i>... and those in Canada most likely relative to the average switching rate</i>	<i>62</i>
Combined analysis of car and home insurance	64
Devices used by online buyers segmented by age	64
<i>Online insurance buyers aged 18 to 34 are most likely to use mobile devices for this purpose</i>	<i>64</i>
Overlap in usage of aggregators.....	65
<i>Most buyers through comparison sites acquire just one of car or home insurance in this way, not both</i>	<i>65</i>
Performance metrics for leading aggregators	68
Consumer awareness	68
<i>CHECK24 (in Germany) scores the highest recognition rate followed by Comparethemarket.com (in the UK).....</i>	<i>68</i>
<i>Comparison sites in Canada and the US have relatively low recognition rates.....</i>	<i>68</i>
User conversion rates.....	69
<i>Comparison sites in China are most effective in converting users to buyers</i>	<i>69</i>
<i>... and those in France least so</i>	<i>69</i>
Planned usage of aggregators	71
Likelihood of using an aggregator in the next 12 months	71
<i>Aggregators in Canada, France and the US may have to work hardest to attract customers</i>	<i>71</i>
3.0 AUSTRALIA.....	74
